

CYBERSECURITY CONSULTING

Strengthening Your Cybersecurity Posture

Identify exposure. Prioritize risk. Remediate vulnerabilities. Verify closure. Strengthen governance.

IDENTIFY

PRIORITIZE

REMEDiate

REVALIDATE

GOVERN

Professional cybersecurity assessment, VAPT and ISO 27001 / ISMS readiness support

Exposure rarely lives in one place.

Applications, identities, infrastructure and governance form one connected attack surface.

THE CLIENT REALITY

One weakness can become a complete attack path.

Misconfigurations, weak access controls, vulnerable components and human error can combine across domains - turning isolated gaps into operational and business risk.

01 Blind spots compound

Gaps across layers can reinforce one another.

02 Risk competes for attention

Teams need evidence and prioritization - not scanner noise.

03 Unverified fixes remain risk

Remediation only matters when closure is confirmed.

What must be strengthened

Security is not one scan. Workmate connects technical testing, human risk and governance into one security posture.

Applications + APIs + Infrastructure + People + Governance

VAPT: from discovery to verified closure

Find the weakness. Validate the risk. Fix what matters. Confirm closure.

AUTOMATED + MANUAL

AUTHENTICATED / UNAUTHENTICATED

BLACK-BOX / GREY-BOX

OWASP-ALIGNED

MANUAL SCANNER VALIDATION

CLIENT DELIVERABLES

Executive Summary

Leadership view of risk and priorities

Technical Report

Evidence, impact and affected assets

Remediation Roadmap

Prioritized, actionable fix guidance

Revalidation Results

Retest evidence and closure status

From security controls to a working ISMS

Technical controls, governance, people and process - aligned through a risk-based management system.

ISO 27001:2022 CONTROL GROUPS

ISO 27001 certification is awarded by an independent accredited certification body. Workmate supports gap assessment, ISMS/control implementation, remediation, documentation and certification readiness.

Findings are the start - not the finish.

A governed engagement that moves risk from discovery through remediation and verified closure.

CLIENT VISIBILITY

Kickoff & agreed scope

Roles, assets, windows and rules of engagement

Status updates

Progress, risks, blockers and emerging priorities

Findings discussion

Evidence, severity, impact and remediation options

Executive walkthrough

Risk posture, priorities and closure decisions

CLOSURE EVIDENCE

Technical report | remediation roadmap | retest evidence | closure register | residual-risk status

Technical depth. Clear decisions. Follow-through.

A senior-led security partner focused on evidence, action and measurable closure.

Senior-led engagement

Senior practitioners stay involved from planning through sign-off.

Expert-led testing

Manual security expertise supported by targeted automation.

Peer-reviewed findings

Evidence and severity are reviewed before reaching your team.

Evidence, not scanner noise

Manual validation keeps teams focused on actionable risk.

Closure-focused delivery

Remediation guidance, retesting and final closure status.

Transparent communication

Consistent updates and clear stakeholder visibility.

THE VALUE YOU RECEIVE

Security improvement that teams can act on.

- ✓ Reduced attack surface
- ✓ Prioritized remediation
- ✓ Verified vulnerability closure
- ✓ Stronger application, API & infrastructure security
- ✓ Better cyber-risk visibility
- ✓ Improved governance & ISO readiness

ASSESS. STRENGTHEN. REVALIDATE.

Let's strengthen your security posture.
